Question numbers **26** and **30** are Assertion and Reason based questions. Two statements are given, one labelled **Assertion (A)** and the other labelled **Reason (R)**. Select the correct answer from the codes (a), (b), (c) and (d) as given below.

- (a) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).
 (b) Both Assertion (A) and Reason (R) are true and Reason (R) is **not** the correct explanation of Assertion (A).
 (c) Assertion (A) is true but Reason (R) is false.
 (d) Assertion (A) is false but Reason (R) is true.
26. **Assertion (A)** : If the lines $Px + 6y = 27$ and $2x + 3y = 25$ are parallel, then $P + 4 = 0$.
Reason (R) : If l_1 and l_2 are parallel lines, then their slopes will be equal.
27. **Assertion (A)** : The distance between the parallel lines $x + 3y + 1 = 0$ and $x + 3y - 9 = 0$ is given as $\sqrt{10}$ units.
Reason (R) : Distance of a point (x_1, y_1) from the line $Ax + By + C = 0$ is $\frac{|Ax_1 + By_1 + C|}{\sqrt{A^2 + B^2 + C^2}}$.
28. **Assertion (A)** : The equations of the lines passing through the point $(3, 2)$ which make an angle of 45° with the line $2x - y = 3$ are $3x + y - 11 = 0$ and $x - 3y + 3 = 0$.
Reason (R) : The equation of the lines passing through the point (x_1, y_1) and making an angle θ with the line $y = mx + c$ is $\frac{y - y_1}{x - x_1} = \frac{m \pm \tan \theta}{1 \mp m \tan \theta}$.
29. **Assertion (A)** : The slope of any line perpendicular to x -axis is always 0 .
Reason (R) : Acute angle θ between two lines l_1 and l_2 whose respective slopes are m_1 and m_2 , is given by $\tan \theta = \left| \frac{m_2 - m_1}{1 + m_1 m_2} \right|$.

30. **Assertion (A) :** If three points $(h, 0)$, (a, b) and $(0, k)$ lie on a line, then $\frac{a}{h} + \frac{b}{k} = 1$.

Reason (R) : The line $\sqrt{3}x - y + 8 = 0$ makes an angle of 60° with positive direction of x-axis.
